Trusted Compliance

Certified for the Markets That Matter Most

AMPA Exports holds the certifications and regulatory alignments that international procurement teams demand. Whether you're importing into the European Union, the United Kingdom, the Gulf Cooperation Council, or the United States, our operations are structured to meet your market's exact requirements – eliminating compliance surprises at port of entry.

UK Compliant

Full alignment with UK food safety and import regulations

EU Regulated

Meeting stringent EU seafood import standards

GCC Standards

Gulf Cooperation Council import compliance

USFDA Aligned

Protocols aligned with US FDA requirements

HACCP Approved

Hazard analysis and critical control point certified

12+

Years of Excellence

Sourcing & quality control expertise since 2012

3

Key Global Markets

EU, US, UK & GCC compliant operations

4

Stage QC Process

From vendor vetting to container loading

STRATEGIC ADVANTAGE

Your Independent Eyes & Ears in the Indian Seafood Market

AMPA Exports operates as a buyer-aligned sourcing partner — a critical distinction in an industry where conflicts of interest are commonplace. We don't simply trade seafood; we manage the entire ecosystem of procurement, quality control, and logistics coordination to systematically reduce risk for international importers.

Unlike conventional export houses that represent factory interests, our business model is built around protecting the buyer. Every decision we make — from processor selection to container loading supervision — is driven by your specifications, your compliance requirements, and your commercial objectives.

✓ Buyer-First Mindset

We represent your interests at every stage, not the factory's. Our revenue model ensures complete alignment with buyer outcomes, creating a trust framework that traditional export agents cannot match.

✓ Market Expertise

Deep, hands-on understanding of EU, UK, and GCC compliance landscapes. We stay ahead of evolving import regulations so your shipments clear customs without delays or rejections.

✓ Full Transparency

Real-time reporting on production progress and QC status. You receive detailed photo documentation, lab results, and inspection reports at every milestone — no black boxes, no surprises.

Export-Grade Products

Our product range is sourced exclusively from certified processors across India's premier aquaculture and marine fishing regions. Every lot is inspected for consistency in texture, size grading, and glaze percentage – ensuring your end customers receive the quality they expect, shipment after shipment.

Vannamei Shrimp

White Leg Shrimp – India's most widely farmed export species, prized for its clean flavor profile and versatile processing options.

- HOSO / HLSO formats
- PD / PUD (Tail-on / Tail-off)
- IQF / Block / Semi-IQF

Black Tiger Shrimp

Wild Caught / Farm Raised – Commanding premium pricing in EU and GCC markets for its robust texture and bold flavor.

- HOSO / HLSO formats
- PD / Cooked PDTO
- Block Frozen / IQF

Value-Added Products

Custom Processing – Tailored solutions for foodservice distributors and retail chains looking for private-label Indian seafood.

- Sea-caught prawns & shrimp
- Squid & cuttlefish varieties
- Private label support
- Foodservice & retail packs

End-to-End Coordination for Seamless Procurement

From the moment you place an inquiry to the day your container arrives at destination, AMPA Exports manages every stage of the sourcing process. Our four-stage quality control framework eliminates the information gaps and oversight failures that lead to costly rejections, claims, and reputational damage. You focus on selling; we handle everything on the ground in India.

1

Vendor Verification

Rigorous vetting of processors for technical compliance, production capacity, and verified antibiotic-free history. Only facilities meeting our benchmark criteria enter the approved supplier pool.

2

Quality Inspection

On-site random sampling, organoleptic evaluation, and precise glaze verification during active production runs. Our inspectors work independently – never on the processor's payroll.

3

Loading Supervision

Physical presence during container stuffing to verify cold-chain set points, product placement, and tamper-proof seal integrity. Photo and temperature documentation provided for every load.

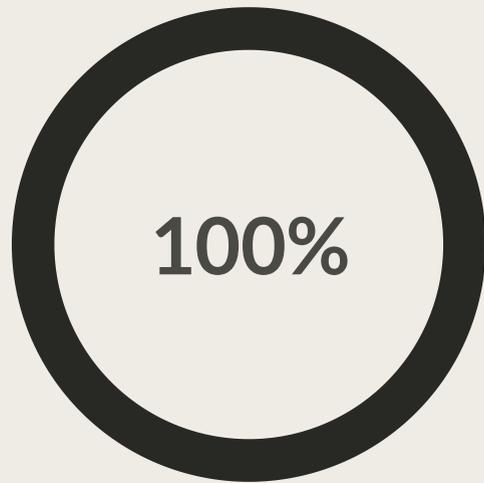

4

Documentation Support

Full coordination of Health Certificates, Catch Certificates, Country of Origin documentation, and all market-specific paperwork required for smooth customs clearance at destination.

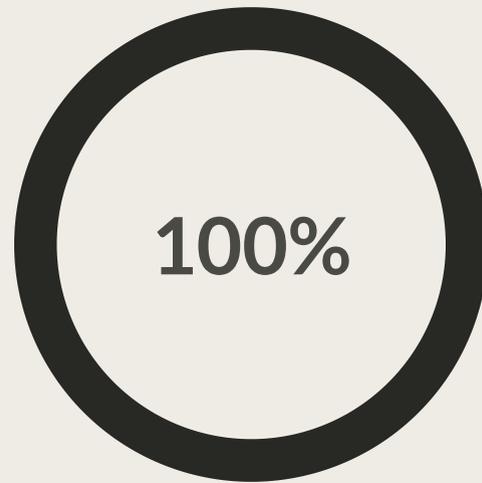

The AMPA Quality Assurance Difference

In an industry where quality shortcuts can cost importers hundreds of thousands of dollars in rejected shipments, our independent QC model provides the protection you need. Every inspection is conducted by AMPA personnel – never by factory staff – ensuring unbiased, accurate reporting at every stage of production.

Independent QC

Never aligned with the processor's commercial interests

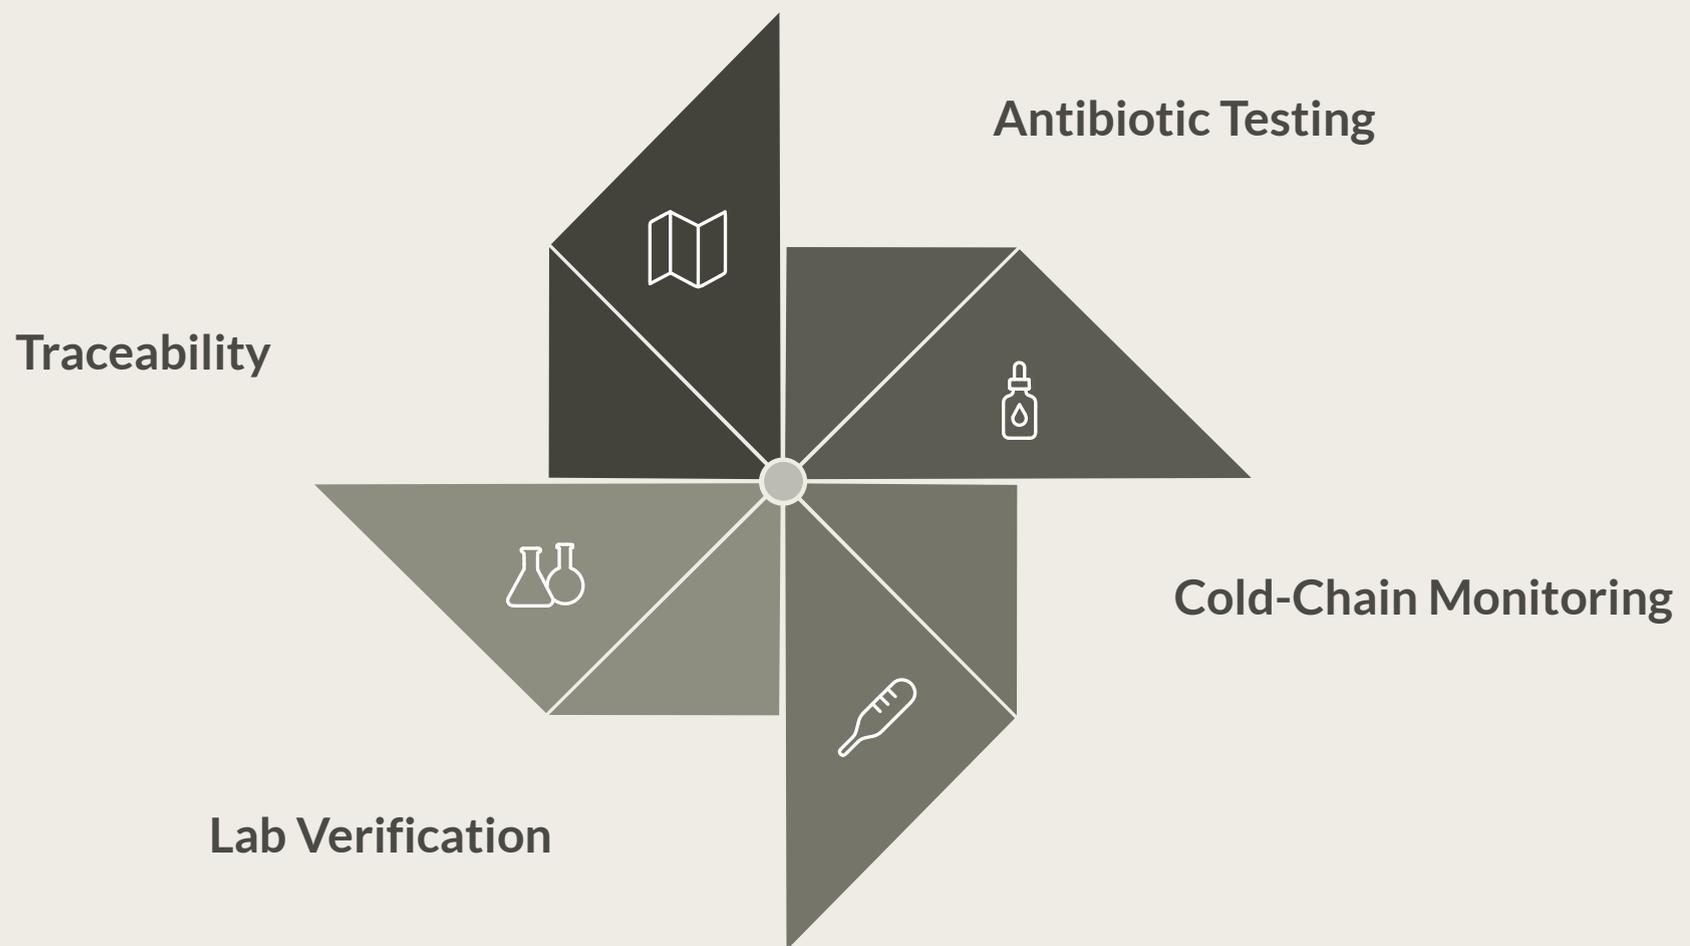

Lot Traceability

Every shipment tracked from farm or vessel to final container

Documentation

Complete photo evidence and lab reports for every consignment

This closed-loop system ensures that no shipment leaves India without passing through each quality gate. Every protocol is designed to catch issues before they become costly problems at your port of entry.

Navigating Complex Regulatory Landscapes

International seafood trade is one of the most heavily regulated sectors in global food commerce. A single non-conformance — an incorrect health certificate, a missed antibiotic residue, or a broken cold-chain — can result in border rejections, financial penalties, and lasting reputational harm. AMPA Exports specializes in navigating these regulatory hurdles across the European Union, United Kingdom, and GCC markets.

Traceability

Complete farm-to-table tracking with batch-level documentation ensuring every product can be traced to its origin.

Antibiotic Awareness

Strict pre-harvest testing protocols aligned with EU MRL limits. Zero-tolerance policy on banned substances.

Cold-Chain Integrity

Continuous temperature monitoring from processing through container stuffing with data logger verification.

Lab Testing

Independent third-party laboratory analysis for microbiological and chemical compliance before every shipment.

Packaging & Freezing Options

We support multiple freezing and packaging formats to match your distribution channel requirements:

- **IQF**

Individually Quick Frozen for retail and foodservice flexibility

- **Block Frozen**

Traditional 1.8 kg or 2 kg Blocks for wholesale and reprocessing

- **Blast / Brine**

High-efficiency freezing for maximum texture retention

- **Private Label**

Custom retail packaging with your brand identity and specifications

Built for the World's Most Demanding Markets

Our export operations are structured around the specific requirements of each destination market. From document formats to labeling standards, we tailor every shipment to meet the exact regulatory framework your country demands — reducing the risk of costly border delays.

European Union

Full compliance with EU Regulation 178/2002 on food safety traceability. Approved establishment numbers, health certificates issued by EIC, and adherence to RASFF alert protocols. All products tested to EU Maximum Residue Limits.

United Kingdom

Post-Brexit compliant documentation including UK-specific health certificates, catch certificates for wild-caught species, and storage declarations. Aligned with FSA import requirements and IPAFFS notification procedures.

GCC Markets

Halal certification coordination, GSO standard compliance, and documentation formatted for Gulf customs authorities. Established relationships with freight forwarders specializing in Middle East cold-chain logistics.

START A PARTNERSHIP

Get in Touch With Our Export Team

Whether you need detailed product specifications, prevailing market prices for Indian shrimp, or want to arrange a sample shipment for your QC team to evaluate – our export desk is ready to assist. We respond to all serious trade inquiries within 24 hours.

Corporate Office (India)

Coimbatore, Tamilnadu, India – strategically located in India's largest seafood processing hub with direct access to major port facilities and certified processing plants.

UK Coordination Office

London, United Kingdom – providing local market liaison for European and UK buyers, facilitating faster communication and documentation review across time zones.
